

the dream

global
conservatory roof

Encapsulate your garden

More than any other product in recent times the conservatory has transformed the look and shape of our homes, and expanded our living space.

The conservatory is the link between home and garden, adding pleasure to our lives and value to our homes. A conservatory transforms the way we use our homes and gardens.

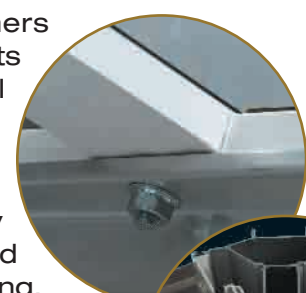

Global is transforming homes throughout the UK. In these pages you will see ideas, suggestions and examples based on the innovations, detailing and build strength of the Global Conservatory Roof to turn your dreams into reality.

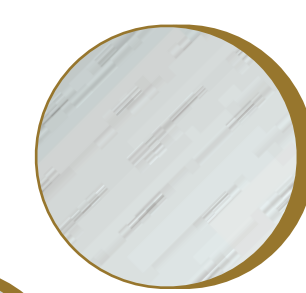

A Global Conservatory guarantees high quality and performance of the highest standards, without making all conservatories the same, while allowing each single building to 'speak the local language', adapting the style of the conservatory to its natural surroundings.

When the designers created the blueprints for the Global Conservatory, one of the initial objectives was to produce a secure Conservatory that could be bolted from inside the building, not outside!

This pre-requisite also enabled us to use a large M8 bolt. Once again not only making the installation easier and quicker, but more importantly allowing you the invaluable peace of mind that your roof cannot be unbolted from outside.

Choice of glass, clear or coloured polycarbonate.

mahogany profile

bronze/opal (internal view)

bronze/opal (external view)

light oak profile

cherry profile

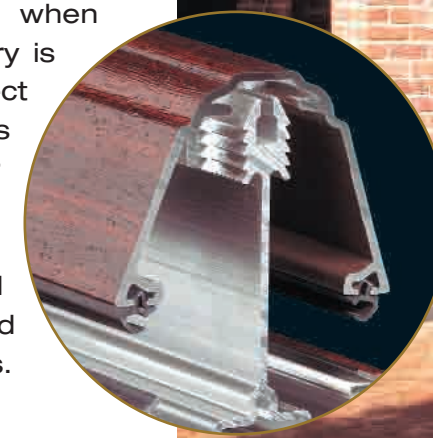

Profile - choice of white or woodgrain.

All Global wood foil profiles are available on both the inside and outside of the building.

Or to complement the style of your home, combinations of these colours with white are also available.

Dark colours absorb more heat than light colours. Simple laws of physics have to be considered at the design stage of any product. All woodgrain Global top cappings are foiled onto powder coated aluminium. So when your conservatory is subjected to direct sunlight it does not warp or distort, which would risk the structural integrity and weather fastness.

The swatches on this page should be used as a guide only and are as accurate as our printing process allows

The Global Finial fastens directly into the ridge top cap, not through it. At no point along the pinnacle of your Global Conservatory is there a hole for water to penetrate through to the inside of your new room.

One of the most visually encapsulating aspects of a conservatory is the cresting.

The uniquely sculptured Global Cresting not only beautifies your home but also provides performance longevity. The interlocking PVCu sections incorporate an interlock that ensures once connected it retains a perfect line. Even the interlock is shaped as a water shroud!

global conservatory roof

keep your cool

The days of conservatories being 'hot in summer and cold in winter' are long gone with Global conservatories.

You can choose not only your climate, but how you want to achieve control. Roof vents are available either with the traditional pole method, electric switch, or electronic rain sensors that automate the whole process without you having to even think about it!

We also offer a state of the art remote controlled climate control unit - designed specifically for conservatory use in dwarf walls.

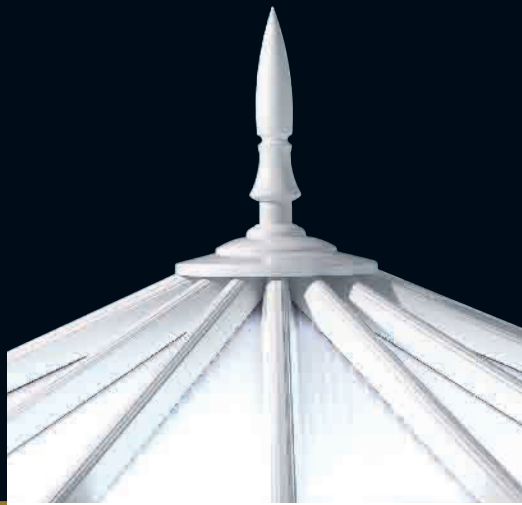

"I wanted a pure white conservatory not a black and white striped conservatory"

The guarantee of a pure white conservatory is a Global Conservatory.

The carefully considered gasket seals perform inside the glazing bars, hidden from view.
